

Empire SuperBlast Generators

Safe, Reliable & Efficient

E-Z Fill® bag breaker and screen (Pat. No. 4,557,825) automatically breaks and filters bags of grit through a large, six-inch inlet.

ASME construction assures vessel integrity.

SuperBlast's slim design lets you wheel it through narrow doorways. There's no side piping to damage.

Moisture separator prevents freeze-up, improves grit flow.

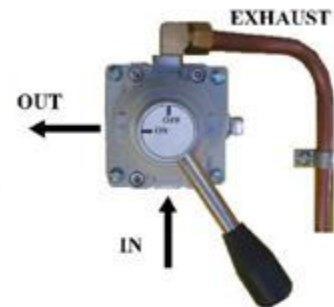

Compact, front-mounted controls reduce the possibility of damage.

Large piping maintains high operating pressure.

Flexible air line simplifies maintenance and minimizes pressure drops caused by multiple fittings.

Manual Quick Shut-off Valve

Electric Quick Shut-off Valve

Low profile makes filling less strenuous. Deep positioning of the screen within the filling head eliminates the need for separate, height-raising, add-on screens.

A large access port (not shown) provides easy access to the interior.

The Sure-Flo® grit valve (Pat. No. 4,518,145) delivers reliable and precise performance. The valve is durable and can be easily serviced at low cost.
